DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2, 6-8, 11-14, and 17-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wetzler (U.S. Patent No. 3,315,908) in view of Konrad et al (U.S. Patent No. 3,519,214).

With respect to Claims 1, 2, 19, and 20, Wetzler, Figures 1-4, teaches an apparatus for winding a web comprising an upstream end; a downstream end; a first belt 28, traveling within a first plane in a first direction from the upstream end to the downstream end; a second belt 45, traveling within a second plane in a second direction from the downstream end to the upstream end, wherein a web W, in contact with the first belt, traveling in the first direction, and comprising a cigarette comprising a leading edge of the web, is wound around the cigarette by contact with the second belt; the first belt travels at a first speed, the second belt travels at a second speed lower than the first speed. Konrad et al, Figures 1-3, teach first and second belts in close proximity at one end and spaced apart at another end. It would have been obvious to one of ordinary skill in the art to replace the positioning of the belts of Wetzler with those of Konrad et al for the purpose of eliminating movable roller 65 thereby simplifying the machinery necessary to wind a roll. Further It would have been obvious to one of ordinary skill in the art to replace a single belt with a plurality of belts since it has been held that mere duplication of

Art Unit: 3654

essential working parts of a device involves only routine skill in the art and the device would work equally well whether it was a single belt or a plurality of belts.

With respect to Claims 6-8, Wetzler in view of Konrad et al are advanced above. It would have been an obvious matter of design choice, as determined through routine experimentation and optimization, to dimension the web of Wetzler in view of Konrad et al as specified in Claims 6 and 7, lines 1-2 because one of ordinary skill would have been expected to have routinely experimented to determine the optimum dimensions for a particular use.

With respect to Claims 11-14, 17, and 18, the method described in these claims would inherently result from the use of Wetzler in view of Konrad et al of as advanced above.

Allowable Subject Matter

Claims 3-5, 9-10, and 15-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
